

KMSV, KMSP insulated silencer

Description

KMSV, KMSP insulated rectangular silencers are designed for use in rectangular ventilation systems. Absorption cartridges have V-shaped ends in order to reduce the resistance of the silencer. We produce cartridges with thickness of 100, 150, 200 and 300 mm.

The rectangular silencer consists of an insulated outer shell and absorption cartridges, the standard material is hot-dip galvanized sheet steel. The shell ends of the silencer are equipped with z-profile. The shell insulation and absorption cartridges material in KMSV silencers is rock wool, in KMSP it is polyester material.

On special order we also produce silencers of stainless, acid-proof or zinc-magnesium coated steel.

Marking of product

1. Marking
KMSV - Absorption material is rock wool
KMSP - Absorption material is polyester
2. a - Width
3. b - Height
4. L - Length
5. i - Thickness of shell insulation
6. n - Number of cartridges
7. m - Cartridge thickness
